

Centers for Disease Control and Prevention :

- “Good hand hygiene is the single most important behavior to stop the spread of illness.
- Over 80% of all infectious illnesses are spread by the hands.”

All health professionals are concerned with the spread of nosocomial infections.

A leading SW Indiana Hospital wanted to insure their patients only came in contact with staff and visitors who had truly clean hands.

The Hospital’s Infection Control Department identified the hand sanitizing options available in the marketplace, and decided to determine which was most effective.

After the Hospital ran these culture tests, a clear winner emerged- Instant Hand Sanitizer!

Bacteria cultured from a normally unsanitized hand

Bacteria cultured from a hand after washing with a leading antiseptic skin cleanser and water

Bacteria cultured from a hand sanitized with Instant Hand Sanitizer

Instant Hand Sanitizer

- An alcohol-based sanitizer that kills 99.9% of the most common disease-causing germs virtually on contact, without water.
- Easy-to-use antimicrobial gel with citrus fragrance evaporates quickly & leaves no residual fragrance, formulated for frequent use.
- Mild, non-irritating, leaves hands feeling soothed and refreshed.
- Special Hand Sanitizer Dispenser with 6 1000ml bag-in-box per case, also available in 12 4 oz bottles per case.

Perfect for hospitals, offices, managed care facilities, schools, foodservice. **Call us for details!** Further information online at www.protexall.com
